

Model 379 Fill Cap & Vent Combination

SPECIFICATION SHEET

Application

The Morrison 379 is designed for tank filling applications where a tight fill connection is not required. Atmospheric venting takes place through the fill opening.

Features and Details

- Male threaded vent installs directly into a female threaded opening of a small storage tank
- Provides direct filling access point when the hinged fill cap is in the open position
- When closed, the screened opening protects the tank from debris and insects
- Lockable with a padlock

Materials of Construction

- Body... Aluminum
- Screens... Stainless steel

Item Number	Size	Weight (lbs)
379---0100 AC	2" NPT	1.25

NOTE

Tank fill caps must not be used as a substitute for proper normal and emergency venting on tanks. It is essential that proper venting be provided in compliance with all applicable codes for every tank system.
