

# Fig. 449 CRV Test Measure & Funnel

*For the Canadian Market*

The Test Measure is equipped with a high resolution 3 inch neck with reducer. It is used with a mating vapor retention funnel. This equipment, when used together, is designed to minimize vapor loss during the testing procedure by maintaining a saturated vapor space in the test measure.

Note: The Funnel and Prover must be used together to meet Measurement Canada Requirements.

Note: This equipment has been evaluated by Measurement Canada for accuracy performance when used to perform inspection of gasoline or diesel related fuel dispensers. The evaluation of equipment includes repeatability, linearity and stability. This equipment has been evaluated and approved to be used in lieu of closed loop testing equipment to reduce vapor loss effects while testing gasoline systems.
