9095AA3300AVEVR

### **NO OTHER MODELS OR SIZES AFFECTED**

It has become known to Morrison Bros. Co. that, during this designated timeframe, a small number of the overfill prevention valves listed above, may have been made with an undersized dash pot drain hole. You are receiving this notice because our records indicate that your company received one or more of the overfill prevention valves listed above, during the designated timeframe.

Few valves sold during this timeframe will have this issue. If you purchased a 3" 9095AA valve during this timeframe, and your customer, or the end-user, was able to pump fuel successfully through the valve during their first tank fill, then that valve is fine. However, if your customer, or end-user, was unable to pump fuel through a brand new valve on their very first try, their valve probably has an undersized dash pot drain hole. If that is the case, please contact our customer service department at (800) 553-4840 or [custserv@morbros.com](mailto:custserv@morbros.com). A representative will work with you to have your valve returned and a new one sent to you at no charge.

If you still have some 3" Fig. 9095AA valves in your inventory, that were purchased during this timeframe, you can check the valves to determine if they were made correctly. To do this, you will need to unbox the valves, turn the valves upside down, and look down into the pipe on the bottom of the valve. A flash light might be helpful during this process. When you look down into that pipe, you will see an aluminum cross bar with a hole in the middle. Please refer to the examples on page 2 regarding a correct and incorrect dash pot drain hole.

If your valve(s) has the small sized hole, please contact our customer service department at (800) 553-4840 or [custserv@morbros.com](mailto:custserv@morbros.com). A representative will work with you to have your valve returned for a replacement. You can also contact customer service if you are not comfortable inspecting your valves. A representative will work with you to have your valves returned for inspection.

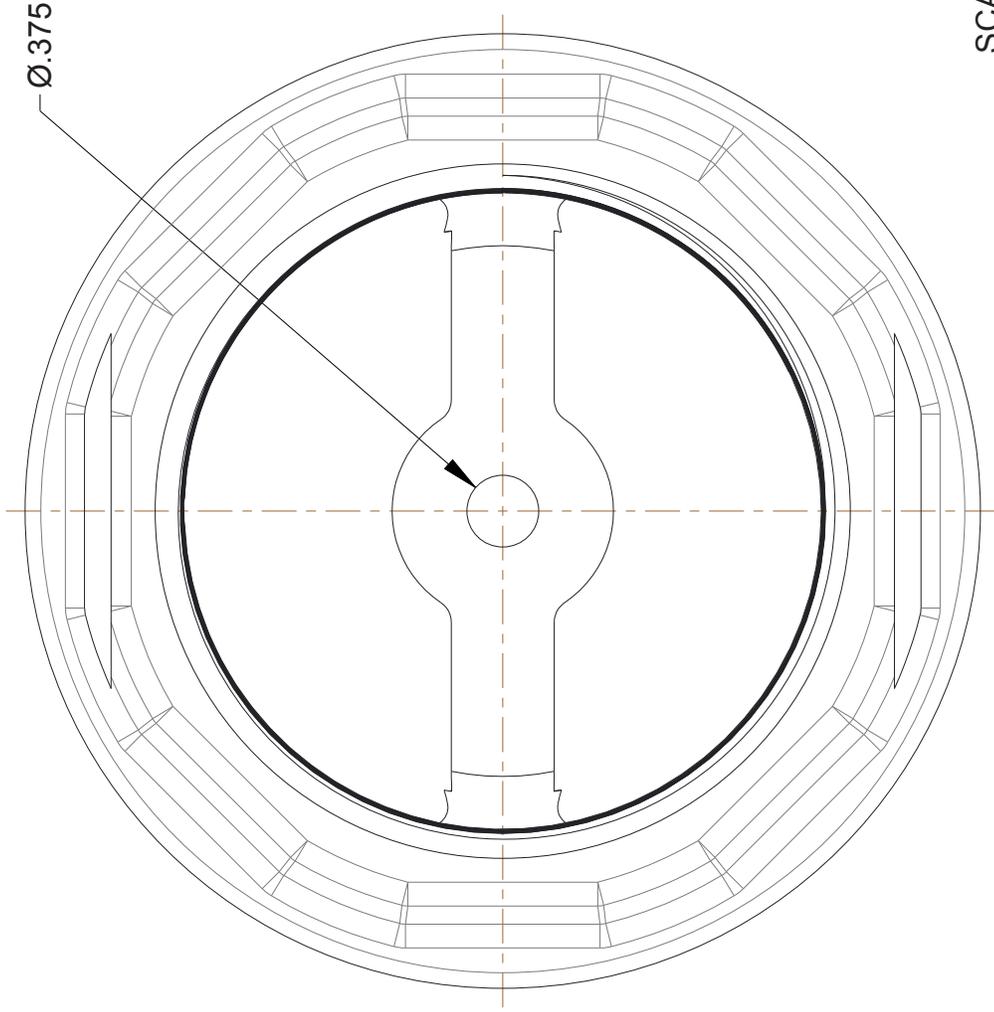

Morrison products are sold through authorized distributors. We must ask our distributors to forward this notice to any of their customers who purchased one of the valves listed above. We sincerely apologize for this inconvenience and appreciate your assistance in this process.

Yours truly,

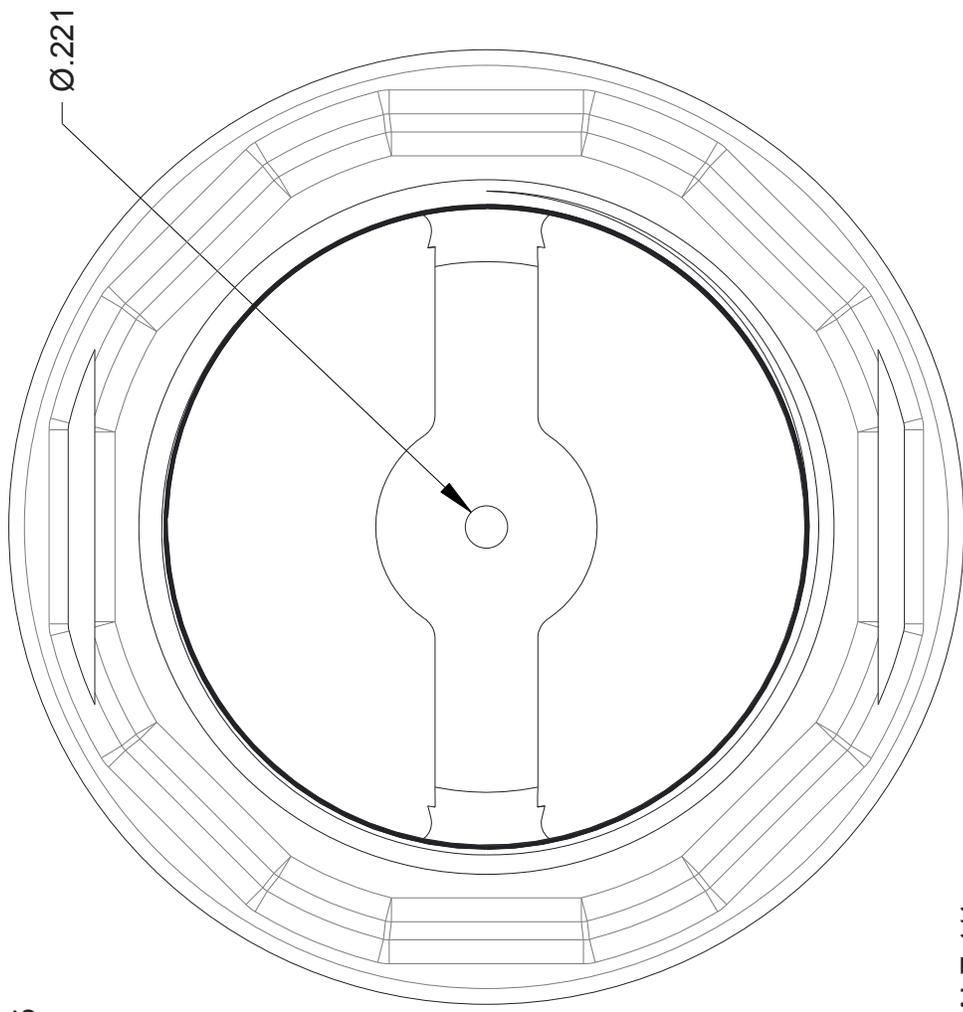

Rick Zillig  
Director QCCS
