Change to Clock Gauge Repair Program

As many of you are aware, Morrison Bros. Co. has offered repair service for our Fig. 818 and Fig. 918 Clock Gauges for many years. While these repairs were performed at a cost to the customer, the service helped refurbish older gauges that had provided reliable service in the field. Over the past several years, we have made improvements in design and manufacture that, while yielding a better gauge, have made it more difficult to repair older gauges that were manufactured in a different manner. Because of these changes, we will no longer be able to repair gauges that are more than five years old. If you are uncertain of the age of your gauge, you can find the date of manufacture on a white sticker on the inside of the back cover. On newer units, the date will also be stamped on the numbered clock face of the gauge.

This change does not affect our warranty, which covers the gauges for one year from the date of purchase and provides repair or replacement for units found to be defective in manufacture. As always, if you suspect a problem with your gauge we will be happy to inspect your gauge and provide you with the results of our evaluation. If you have any questions or concerns, please feel free to contact me at (800) 553-2709 ext. 221 or email at rzillig@morbros.com.
