

## New Products Generate Interest at PEI-NACS Tradeshow

With enthusiasm and excitement, Morrison Bros. Co. spends months preparing for the annual PEI-NACS Tradeshow. "This is an event we look forward to each year" explains Jerry Schollmeyer, Sales Manager for Morrison Bros. Co." It's an opportunity to meet face-to-face with a lot of our distributors as well as several contractors, engineers, and marketers. It's always fun introducing new products, receiving feedback, and occasionally getting an order!

This year's event was particularly exciting as Morrison had a lot to talk about! Displaying more than a dozen new products, visitors to the Morrison booth were eager to see the company's latest product developments. According to Tim Weiss, Vice President of Business Development, "Those who stopped by our booth were genuinely interested in the new products we displayed. From the EVR products to the new remote fill box to the gallon gauge, the displays generated much discussion and interest."

Below is a summary of the new products displayed at this year's PEI convention.

Morrison's line of Enhanced Vapor Recovery (EVR) products were on display for attendees to review and ask questions. The EVR products brochure and price list are posted on our website. Many of the EVR products are priced the same as our non-EVR products! Click [here](#) for more information about Morrison's EVR products.

The Morrison 715 Series remote fill box made its debut at the PEI convention. The vented, weatherproof lockable box is made of rugged 14 gauge steel and is powder coated for long lasting corrosion protection. The 10-gallon

capacity fill box can be ordered plumbed with the valves and connections or as an empty fill box. Click [here](#) for more information.

The Morrison Model 818G and 918G Gallon Gauges were officially introduced at the PEI tradeshow. The Gallon Gauge provides an approximate read out clearly displayed in gallons. The new gauge eliminates the need to convert feet and inch gauge readings to gallons. Click [here](#) for more information about Morrison's new gallon gauges.

The newest member of Morrison's overflow prevention valve family also made an appearance at this year's PEI convention—the 9095C! The display featured perhaps the valve's most popular advantage—a high-level shutoff. The 9095C has the floats placed above the dashpot to provide high flow with a high shutoff point, allowing for maximum usage of allowable fuel storage capacity. Click [here](#) for more information.

## New Venting Guide Released

Morrison Bros. Co. recently published an updated version of our venting guide which includes the latest information (venting capacities, etc.) for our new 244 emergency vents. Reference material throughout the guide, such as UL 142 and NFPA 30, has been updated to reflect information from the most recent editions.

A summary of the updates and additions to the September 2011 venting guide can be found inside the front cover of the guide. To view an electronic version of the venting guide, go to [www.morbros.com](http://www.morbros.com) and click on [Literature](#). To receive a hard copy of this publication, contact our Customer Service Department at [custserv@morbros.com](mailto:custserv@morbros.com) or call 800-553-4840.
